

### STRING Pocket - introduced 2005

String® pocket is the smallest version of string®. It comes in a kit of two panels and three shelves – making a small bookcase that will fit in almost anywhere. If you get another kit something interesting will happen: Doubling the number of panels more than doubles the possible number of sections, three instead of two. Note that string® pocket can also be expanded vertically. String® pocket is already available in various colours, and this year two new choices are introduced: Oak and black stained ash.

*The Swedish architect and inventor of the famous String system, Nils Strinning was among a group of mid-twentieth century designers that helped to build the foundations of what we now call Scandinavian Design.*
